# Setup Instructions:

1. Unpacking the Application:

Begin by extracting the application files from the provided archive. Ensure all contents are in a dedicated folder for easy access.

2. Backend Setup:

- Navigate to the "Backend" folder.
- Open a command prompt or terminal in this folder.

2.1 Install Python Modules:

To install the required Python modules, execute the following command:

- **pip install -r requirements.txt**

3. Frontend Setup:

- Navigate to the "Frontend" or "Angular" folder.
- Open a command prompt or terminal in this folder.

3.1 Install Node Modules:

Install the necessary Node modules by running the following command:

- **npm install**

4. Backend Application:

- Return to the "Backend" folder.

To start the backend part, execute the following command:

- **python app.py**

5. Frontend Application:

- Return to the "Frontend" or "Angular" folder.

Start the Angular application and open it in your web browser using the following command:

- **ng serve -o**

This command will automatically open the application in your default web browser.

6. Video Demonstration:

- For a step-by-step demonstration, refer to the provided video guide for further assistance.
